BENEFITS

Architectural Finishes

BEHLEN buildings can be customized to have the look you want. Pick any windows and doors on the market and add stucco, brick, glass, masonry and more to give your building an extra element of design.

Corrosion Protection

BEHLEN buildings are well suited for agricultural use, as workshops, or for storage. BEHLEN routinely provides enhanced coatings for structural steel, as well as standard G90 zinc coated secondary steel to make it suitable for almost any industry.

Flexibility

We offer flexible solutions for your building needs. Our rigid frame system is able to be designed and constructed to fit your available space and architectural requirements.

PHOENIX BUILDING PACKAGES

The **Phoenix** is a light gauge structural building solution that provides more storage space in any location. Constructed of bolt-together, light gauge structural steel, combined with a low maintenance steel roof, you can be sure that your contents are protected with BEHLEN.

Available in two standard packages with options for additional bays, windows and doors, the Phoenix building installs quickly and easily, and is an affordable option for your storage solutions. Many colour options are available to suit your property.

Call Earlton Timber Mart to learn more and how the Phoenix is the right building solution for you.
